Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

V sklopu predmeta se student po poveže v interdisciplinarno skupino in spozna s širšim področjem določenega dela strokovne tematike. Zato so pogoj za vključitev v delo opravljene študijske obveznosti prvih štirih semestrov študijskega programa RRP.

In the scope of this course a student participates in inter-disciplinary teams and acquires knowledge from a wider field of a specified professional area. The necessary condition is finished study obligations from the first four semesters of the RRP programme.

Vsebina:

Content (Syllabus outline):

Študentje bodo v manjših interdisciplinarnih skupinah, ali posamično, reševali ter analizirali aplikativne inženirske probleme v obliki projektno-seminarskega dela. Projekti se bodo nanašali na dele ali celotne sklope znanj iz posamičnih ali več področij predhodnih semestrov. Projekti bodo zahtevali integracijsko znanje in inženirske pristope, ob upoštevanju širših teoretičnih in praktičnih vidikov, tudi inter- in intra-disciplinarnih. Izzivi bodo vključevali aktualne tematike iz industrije, širše družbe, mednarodnih ali domačih študentskih tekmovanj in drugih akademskih izzivov. Pri tem bo uporabljen tematsko-problemski pristop, kjer se bo združevalo znanja z različnih področij. Zato bodo študenti spodbujeni, da se povezujejo tudi s kolegi drugih fakultet in/ali industrije in družbe, in na ta način razširijo praktične izkušnje reševanja interdisciplinarnih nalog.

Vsebinsko bodo aktivnosti razdeljene v sledeče časovno sosledne vsebine:

The students individually or as a member of a small team analyse and solve applied engineering problems in the form of project-seminar work. The projects are related to partial or comprehensive knowledge areas from the former study semesters. Integrated knowledge and engineering approaches are inherently linked to these projects as well as application of wider theoretical and practical inter- and intra-disciplinary aspects. The content consists of concurrent industrial problems, social issues, domestic and international student's competitions and academic challenges. A contextual hands-on approach is followed when using knowledge integration from different areas of expertise. The students are encouraged to link themselves with the colleagues from the other faculties and/or industry or wider society in order to widen their professional horizon and practical experience by solving inter-disciplinary tasks.

The course content consists of the

1. Kreacija skupin in oblikovanje ustrezne projektne ideje. Formalizacija projektnih ciljev. 2. Teoretične podlage ter iskanje optimalnih rešitev skozi analizo obstoječega stanja in pristopom inoviranja. 3. Razčlenitev projektne ideje v obvladljive podsklope in iskanje morebitnih kritičnih točk. 4. Razdelitev nalog in določitev časovnice. Spremljanje napredka preko predstavitve vmesnih rezultatov in praktičnega dela. 5. Predstavitev in razširjanje rezultatov.	following: 1. Team building and formation of a suitable project idea. Formalisation of project objectives. 2. Theoretical content for finding optimal solutions through the state-of-the-art analysis and innovation approach. 3. Segmentation of the project idea into manageable sub-tasks in identification of risks. 4. Task allocation and definition of time-sheet. Progress control through intermediate-results presentation and practical work. 5. Presentation and dissemination of results.

Temeljna literatura in viri/Readings:

Določena je smiselno v dogovoru z izbranim nosilcem (mentorjem) predmeta za vsakega študenta posebej glede na izbrano problematiko. Literatura je dosegljiva v knjižnici laboratorija, fakultetni knjižnici ali širše. Praviloma študent študira iz člankov, ki so obravnavali podoben primer, kakor ga ima sam definiranega.

It is determined appropriately in agreement with the selected lecturer (mentor) for each student according to the chosen topic. Literature is available at the lab library, faculty library or beyond. As a rule, a student studies from articles dealing with a similar case as he or she has defined.

Cilji in kompetence:

Objectives and competences:

Cilji: 1. Omogočiti študentu seznanitev s temeljno in predmetno specifično literature na delu tematike, ki bo obravnavana v zaključni nalogi. 2. Seznanitev z namensko opremo na	Objectives: 1. To enable the student to get acquainted with the basic and specific literature on the topic that will be discussed in the Bachelor's degree thesis. 2. To familiarize with the specific equipment in the field of experimentation and use of computer tools. Thus the student learns about the basic functionality of the equipment he can use. 3. The course is carried out in the laboratory (one or more), depending on the agreement with the mentor and course lecturers. Competencies: S1-RRP: The ability to define, understand and creatively solve professional challenges.

strokovnega jezika.

S6-RRP:

Usposobljenost za uporabo pridobljenih znanj pri samostojnem reševanju tehničnih problemov v strojništvu.

S7-RRP:

Sposobnost iskanja virov, kritične presoje informacij, samostojnega nadgrajevanja pridobljenih znanj in poglobljanja znanja na posameznih specializiranih področjih strojništva.

S8-RRP:

Usposobljenost za delo v skupini in interdisciplinarno povezovanje.

P1-RRP:

Obvladovanje temeljnih teoretičnih znanj, ki so bistvena za obvladovanje tehničnega področja strojništva.

P4-RRP:

Sposobnost osnovnega fizikalnega, matematičnega in numeričnega modeliranja problemov z razvito sposobnostjo kritične analize rezultatov.

<p>P6-RRP: Sposobnost samostojnega izvajanja manj zahtevnih razvojnih, inženirskih in strokovno organizacijskih del ter sposobnost kreativnega reševanja posameznih dobro definiranih nalog na področju strojništva.</p>
